# World's Deadliest Animals

- Number of people Killed by animals Per year

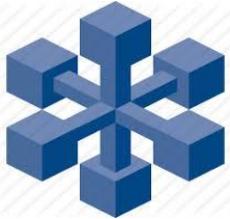

**Human  
475,000**

**Mosquito  
725,000**

A visual presentation of information in the form of a chart, graph, or other image accompanied by minimal text, intended to give an easily understood overview, often of a complex subject is:

## DATA

- The most important component of an infographic is accurate data. As an organization, you may already have data you can use, you just need to find it and sort it. Don't forget that the data has to tell a story.

## FONTS

- Use appropriate fonts. Make sure it is legible in both large text and small text – especially when using numbers. Choose a maximum of two fonts. Allow for various size headlines to break up the data. Organize the data visually to guide your audience from beginning to end.

## COLOR PALETTES

- Keep your colour scheme to a maximum of three colours. Too many colours can make your infographic confusing.

## INFOGRAPHICS

- Contains the infographics' name, which is written slightly.

## HEADING

## VISUALS

- Related to the sense of sight. Ideas, concepts, data & other information must be associated with images & techniques.
